Dockerfiles and Making Images

- Building Your Image

Building Your Image

To build your Docker image, make sure you are building within the same directory as your Dockerfile.

```
docker build -t myusername/myimage:tag .
```

Multi-platform builds, and auto-push:

```
docker buildx build \
--push \
--platform linux/arm/v7,linux/arm64/v8,linux/amd64 \ --tag your-username/packagename:tag .
```
